

Appendix M—Draft Trail Guidelines

Guidelines for trails

The trail system is a key component for education, research, and recreation taking place in the North Campus. The trail system provides convenient access for research and education, for both the UAF scientists and community, and provides recreation opportunities for UAF and the Fairbanks community. The UAF Master Plan directs the North Campus

HOWEVER, the trail system and its uses *must* be compatible with the other uses occupying the North Campus at

Americans with Disabilities Act compliance.

Guidelines for lighting trails

The issue of outdoor lighting has been raised. Due to the potential for negative effects on research and

current and proposed terminus of the light by the T-Field road to the southeast corner of the T-Field. The survey

4. If the lights are expanded, they should be located near existing power.

5. The lights should be concentrated in a small area to minimize the

this area and this area was identified as a priority for lighting in the Skarland Trails Management Plan.

- 4. The T-Field itself, may receive enough light from the moon sky (plus potential T-Field road lights) to be safely skied at night.

Guidelines for walking trails in North Campus

The Skarland Trails Plan provides a concept for winter walking trails on the North Campus. This plan should be

- 1. These should be located where walking trails are not skiable.

along the southern boundary of the North Campus and have easy access from various points of
